

LAYOUT PLANNING / DESIGN – City of Mississauga

Detailed Design: After the Masterplan process is finalised a detail design phase was initiated which included:

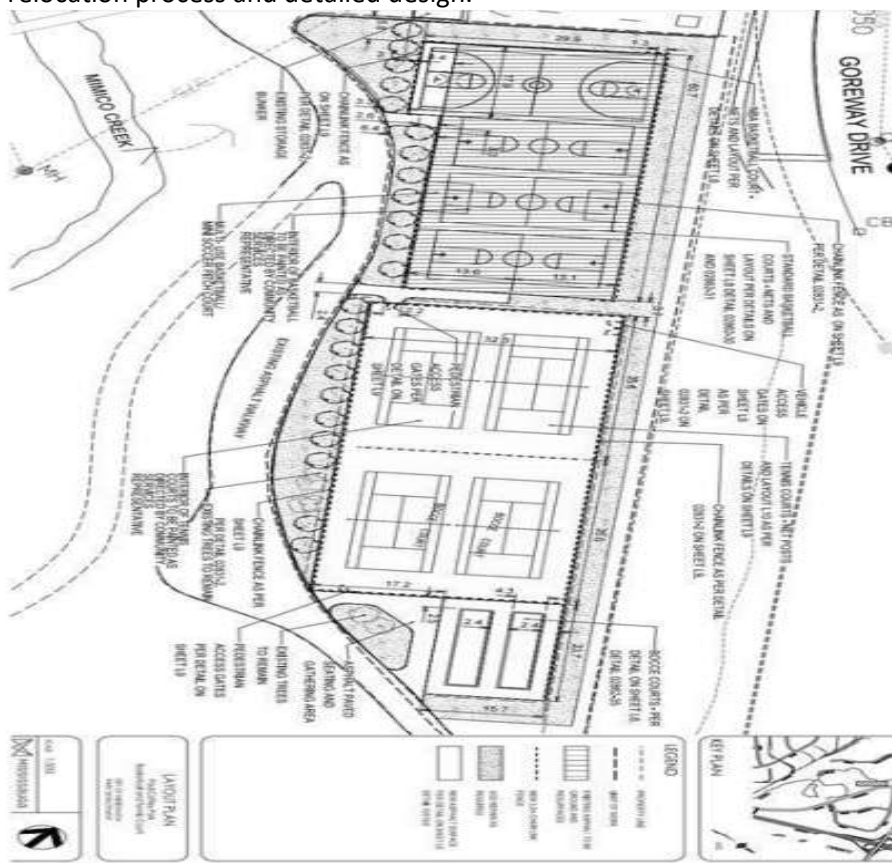

- full site inventory and survey of conditions
- infrastructure confirmation
- identification of site constraints
- detailed facility layout

Tennis Court Orientation:

•The preferred orientation for Tennis courts is generally a North/South orientation to eliminate the advantage or disadvantage and danger of a player having to look into the setting sun in late afternoon early evening

New Court Layout:

•The new courts are more in line with the North/South orientation which is a very positive outcome of the relocation process and detailed design.

•The footprint of the 4 courts is so large the designers have provided the most efficient and best layout for the courts in the new Sport Court Area, while maintaining the preferred North South orientation taking into account the sun angles throughout the day.
